OFFICIAL TECHNICAL HANDOVER

जनसेवा 09 (JanSeva 09)

Ward 9 Citizen Grievance Portal & Android App

Document Ver: 1.0
Date: October 2026
Status: Handover Ready

1. Executive Summary & Scope

This document outlines the complete procedure to transfer **100% ownership** of the **जनसेवा 09** platform from the developer to the client. Upon following this procedure, all hosting, database management, cloud billing, source code repositories, email notification services, and mobile APK distribution will reside exclusively within client-owned accounts. The developer will retain zero access, billing liability, or operational responsibility.

> **Key Principle: Full Decoupling**
> No personal accounts (such as developer Gmail, personal Vercel, or personal Supabase accounts) should remain in the production environment. All services must be migrated to dedicated client organization accounts.

2. Required Client Accounts Checklist

Before beginning the transfer, the client must establish the following free or organization accounts using an official email (e.g., `ward09.jodhpur@gmail.com`):

Service	Purpose	Sign-Up URL
GitHub	Source code repository hosting	`https://github.com/signup`
Supabase	PostgreSQL Database & Storage	`https://supabase.com`
Vercel	Live Next.js production hosting	`https://vercel.com/signup`
Google Account / Gmail	Automated citizen & sanchalak email alerts	Dedicated Ward official Google account

3. Database Handover (Supabase)

The system stores citizen complaints, daily work logs (दैनिक कार्य), ward stats, and admin actions on Supabase PostgreSQL.

Option A: Transfer Project Ownership (Zero Downtime — Recommended)

1. Log into the developer Supabase dashboard (`https://supabase.com/dashboard`).
2. Select project `ward9`.
3. Navigate to **Project Settings** → **General** → **Members / Team Settings**.
4. Click **Invite Member** → Enter client's registered Supabase email → Select **Owner** role.
5. Once the client accepts the invitation, the client removes the developer's email from the organization. Ownership is 100% transferred.

Option B: Fresh Setup on Client's Supabase Account

1. Client creates a new project on their Supabase dashboard named `janseva09`.
2. Open the **SQL Editor** in the new project.
3. Copy and execute the entire contents of `supabase-schema.sql` (provided in the repository root). This builds all tables, indexes, and row policies.
4. Retrieve the following credentials from **Project Settings** → **API**:
   - `Project URL` (e.g., `https://<client-project>.supabase.co`)
   - `anon / public key`
   - `service_role key` (Secret)

4. Web Hosting & Server Handover (Vercel)

The web portal runs on Next.js 16 and is hosted at `https://janseva09.vercel.app` (or client custom domain).

Step-by-Step Vercel Transfer:

1. **Project Transfer via Vercel:** In Vercel Project Settings → **Advanced** → **Transfer Project** → Enter client's Vercel username.
2. **Alternative (Import via Client GitHub):**
   - After the client receives the GitHub repository, log into client Vercel.
   - Click **Add New...** → **Project** → Import `janseva09`.
   - Framework Preset: `Next.js` (automatically detected).
3. **Configuring Environment Variables in Vercel:**
   Add the following keys in **Project Settings** → **Environment Variables**:

Variable Key	Source / Value	Description
`NEXT_PUBLIC_SUPABASE_URL`	Client Supabase Project URL	Database REST endpoint
`NEXT_PUBLIC_SUPABASE_ANON_KEY`	Client Supabase Anon Key	Public browser database key
`SUPABASE_SERVICE_ROLE_KEY`	Client Service Role Key	Backend privileged admin key
`SUPABASE_SECRET_KEY`	Client Service Role Key	Fallback backend secret key
`ADMIN_PASSWORD`	Secure password chosen by client	Portal admin panel access password
`SANCHALAK_EMAIL`	Client official email	Receives real-time complaint alerts
`SMTP_HOST`	`smtp.gmail.com`	Outgoing mail server
`SMTP_PORT`	`587`	Standard TLS mail port
`SMTP_USER`	Client official Gmail address	Sender account
`SMTP_PASS`	Google 16-char App Password	Dedicated SMTP app password
`SMTP_FROM`	`"वार्ड मित्र 09" <email>`	Email display header
`NEXT_PUBLIC_APP_URL`	`https://janseva09.vercel.app`	Production web base URL

5. Email & SMTP Configuration (Google App Password)

> **Crucial Step: Removing Personal Email**
>
> All outgoing citizen emails (complaint registration code, resolution confirmation) and Sanchalak alerts must be migrated to the client's Google Account.

1. Log into the client's official Google account.
2. Navigate to **Manage Your Google Account** → **Security**.
3. Ensure **2-Step Verification** is switched **ON**.
4. Under 2-Step Verification, scroll down to **App passwords**.

5. Create an App Password with name: `JanSeva Portal`.
6. Google will generate a 16-letter password (e.g. `abcd efgh ijkl mnop`).
7. Set this 16-character string as `SMTP_PASS` in Vercel environment variables.

6. Source Code Repository Transfer (GitHub)

1. Open repository: `https://github.com/deorakamlesh07-droid/janseva09`
2. Go to **Settings** → Scroll down to **Danger Zone**.
3. Click **Transfer ownership**.
4. Enter the client's GitHub username or organization name and confirm.
5. The client accepts the email invitation to complete the repository transfer.

7. Android Mobile App (APK) Handover

The mobile app is built with **Capacitor**. It functions as a native Android container loading the secure production web application, ensuring instant real-time synchronization with website updates.

App Configuration Summary

- **App Package ID:** `com.ward09.jodhpur`
- **App Name:** `जनसेवा 09`
- **Icon Assets:** Official Ward 9 icon generated across all Android densities (`mipmap-mdpi` to `mipmap-xxxhdpi`) with adaptive icon safe-zone margins.
- **Production URL:** Configured in `capacitor.config.ts` pointing to the live portal.

How to Build Future APK Releases:

```
# 1. Navigate to android directory
cd e:\ward9\android

# 2. Build Debug APK (for instant testing)
.\gradlew assembleDebug
# Output: android\app\build\outputs\apk\debug\app-debug.apk

# 3. Build Release APK (for production / distribution)
.\gradlew assembleRelease
# Output: android\app\build\outputs\apk\release\app-release-unsigned.apk
```

8. Master Deliverables Checklist

Asset / Deliverable	Handover Format	Client Verification
Web Portal URL	`https://janseva09.vercel.app` (or custom domain)	[ ] Verified active
Admin Panel Access	URL: `/admin` | Password: Set by client	[ ] Login confirmed
Database & Storage	Supabase Project Dashboard	[ ] Owner role active
Hosting Server	Vercel Dashboard	[ ] Project transferred
Source Code	Full Git Repository	[ ] Transferred on GitHub
Android APK	Installable `.apk` file with custom ward icon	[ ] Installed on device
Email Notifications	Citizen & Sanchalak automated emails	[ ] Test email received

9. Formal Sign-Off & Acceptance

By signing below, the client acknowledges receipt of all assets, source code, administrative credentials, and operational controls for JanSeva 09. The developer is fully discharged from future cloud hosting fees, maintenance, and data administration obligations.
